

PARTS LIST AND INSTRUCTIONS

UTILITY WAGON

FACTORY ORDER NUMBER 7-2112

(Formerly 7-2111)

ASSEMBLY

The wagon is shipped completely packed in one carton. The wagon side and end panels have been pre-assembled to the bed using hardware conducive to good packaging and handling.

1. Remove from carton, separate and identify all loose parts. Place bed assembly **upside down** on suitable work surface.

2. Remove the lock nuts from the carriage bolts securing the side and end panels to the bed; re-insert the bolts from the opposite direction and secure with **wing** nuts. Save the lock nuts for later use.

3. Note the difference in width between the four (4) holes punched toward the center area of the bed. Examine the two bed supports noting that one channel leg of each has two holes near one end (rear). Position these ends, holes upward, at the **wide** (rear) bed hole locations with channel legs facing each other and secure supports to the bed with four carriage bolts and lock nuts. (Leave these and subsequent bolts slightly loose to ease assembly.)

4. Secure rear axle assembly (Ref. #15), positioned as shown on the exploded view drawing, through the second holes from end of bed supports with hardware provided.

5. Secure rear braces (dog-leg type Ref. #23) to rear holes in bed supports and bed.

6. Position and secure front axle assembly as shown on exploded view drawing.

7. Install front braces (Ref. #22) and draw bar assembly (Ref. #19).

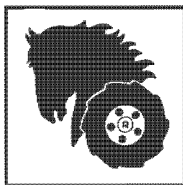

8. Install the wheel assemblies, keeping the valve stem to the outside and lubricate with chassis lube. Tighten securely all bolts and nuts.

OPERATION

The load capacity of the wagon is eleven cubic feet. Weight capacity is 600 lbs.

Sides are removable for hauling bulky loads.

Sharp turns over uneven ground should be avoided when wagon is loaded to maximum capacity.
