Remote-Controlled Mover

Cody Coyne's invention allows you to control your mower with a remote control. Once you've set up the system, you can sit back and watch your mower do its work. Coyne says the system is easy to install and has been tested in various conditions. He says it's perfect for busy people who don't have time to mow the lawn.

An 8 mm wide camera on a camera transmits images to a receiver hooked to Coyne's invention. The system is easy to use and can be operated from anywhere. Coyne says the mower can be programmed to work at specific times and can be controlled from a computer or smartphone.

Coyne is aconomist and entrepreneur who has developed several innovative products. He says the remote-controlled mower is just one of his many inventions.
