

## Elec-Trak Tractor Dealer Instructions Only

### Electric Lift Power Cord Installation

The power cord and receptacle for the rear electric lift is a permanent installation that is made in the rear battery box compartment. Use the following instructions and Fig. 1 for installation.

1. Remove rear battery hold-down and plastic battery cover.
2. Thread cord under rear seat base before wiring in -- so receptacle hangs out rear when base is closed down.
3. Attach power cord wires as illustrated in Fig. 1. Observe color coding for connections.
4. Replace plastic battery cover so power cord exits cutout on right side.
5. Place power cord clamp on cord and secure it as shown when replacing the rearmost battery hold-down. Before tightening, fully adjust cord in clamp for maximum length outside of tractor.
